QUAD™

The QUAD™ railing system is a rectangular post mounted glass system where the glass panels are captured and held at the posts, rather than being mounted at the top and bottom rails as in other systems. This minimizes the number of horizontal rails in the system to allow for maximum visibility. The rectangular posts provide clean lines throughout the system and can be integrated with a grabrail. The QUAD™ railing system is available in both aluminum and stainless steel.

KLEAR™

KLEAR™ railing uses the glass infill up to the 42" height requirement and does not have a top cap on the glass. The glass is held at the post—not top and bottom—thus minimizing the number of horizontal rails in the system and maximizing visibility.

While maintaining structural integrity, this glass railing with no top cap provides more visibility than competitive railing systems.

POST & WALL MOUNTED HANDRAIL

Post and wall mounted handrail is available in an anodized aluminum non-welded mechanical tee connection system and in either 304 or 316 stainless steel. Stainless steel is available as either a non-welded mechanical tee connection system or a welded system. No. 4 polish is standard with other polishes available.

A wide set of concrete stairs with aluminum handrails, set against a stone wall. The handrails are mounted to the wall and the stairs, providing a secure grip. The stone wall is made of large, rectangular blocks. The stairs are made of concrete and lead up to the right. The sky is overcast.
