

Case Study

ITALPOLLINA U.S. HEADQUARTERS

Anderson, Indiana

Architect: krM Architecture (Indianapolis, Indiana)

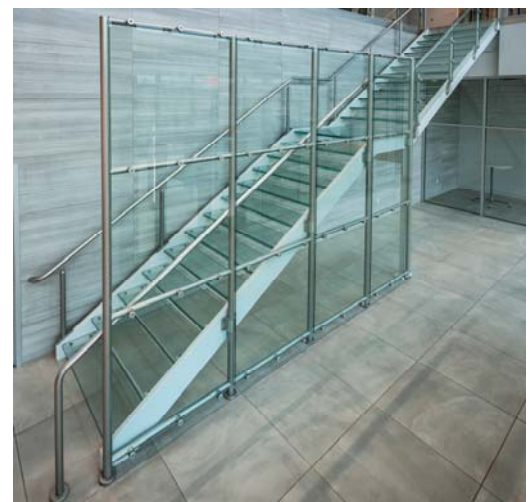

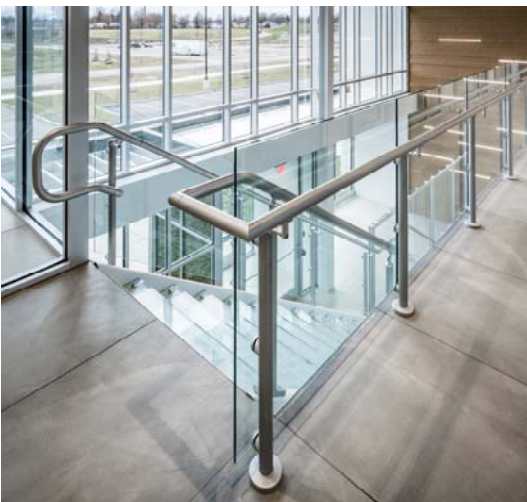

Railing: KLEAR™ Clear Anodized Finish

Infill: Clear Tempered Glass 3/8" Thick

Italpollina, a world leader in organic fertilizers, biostimulants and beneficial microorganisms, planned a new production facility at its U.S. headquarters.

Architect Kevin Montgomery of krM Architecture selected the Hollaender Interna-Rail® KLEAR railing for the entrance lobby and mezzanine. KLEAR is a new railing design from Hollaender that maximizes the transparency of the glass railing by eliminating a top rail, thus allowing the glass itself to fulfill the railing dimensional requirement of 42 inches in height.

A glass wall feature was added to the side of the railing to add both depth and height. This created a very interesting architectural feature.

Kevin Montgomery of krM Architects:

“The railing on this project was a major design element and Hollaender responded to all challenges. We can say that the owners and architects are pleased with the final outcome of the Hollaender railing.”
